Black mold, or Stachybotrys Chartarum, is a toxic mold which thrives in moist household environments. If you believe your home is contaminated, please contact the nearest municipal Poison Control Center.

Benefits of Using a Home Mold Test Kit:
- Detect the Presence of Viable and Non-Viable Mold Spores
- Results in One Minute or Less
- Easy to Interpret Color-Coded Results
- For Initial Evaluation and Post-Remediation Verification Testing
- Safe, Non-Toxic Reagent

Interpretation of Mold Test Results
- Green = Pass
  Pass result. Clean, no mold detected.
- Gray = Caution
  Possible mold residue detected.
- Purple = Fail
  Fail result. Mold residue detected.

Important:
- SmartChoice is designed to detect invisible(trace amounts of mold. Overloading the swab with physical matter by swabbing a visibly dirty surface will inhibit the reaction and produce inaccurate results.
- Test is no longer valid after 10 minutes of sample collection. Dispose after 10 minutes of testing.

Symptoms of toxic mold can include:
- Sneezing, Congestion or Runny Nose
- Coughing, Wheezing or Difficulty Breathing
- Skin Rashes or Lesions
- Watery, Irritated Eyes
- Food Poisoning or Digestive Problems
- Facial Swelling, Headaches or Nausea
HOW TO USE

1. To remove testing swab, hold swab tube firmly with one hand. Twist and pull the blue cap with second hand. Avoid bending the top liquid capsule bulb.

2. Using the swab, thoroughly rub a standard 10 x 10 cm (4 x 4 in) area for a typical flat surface. For irregular surfaces, ensure swabbing technique collects a representative sample.

3. After swabbing, replace swab back in swab tube. Insure cap is completely closed.

4. To activate device, hold swab tube firmly and use thumb and forefinger to break Snap-Valve by bending bulb forward and backward. Squeeze bulb liquid down swab shaft.

5. Shake the testing device for 5 – 10 seconds. Wait 10 minutes at room temperature for color change. Most color changes take place in less than 60 seconds.

6. After 10 minutes, compare color of reagent against PRO-Clean color chart on tube label and record result. If liquid is Purple or Pink, toxic mold spores have been detected.
