**TEST TYPES**

**ANTIBODY TESTING**

- **Use Cases**
  - Serological Testing and Instant Screening

- **Result wait time**
  - Instant: 10 Minutes

- **Sample Collection**
  - Serum, Plasma or Whole Blood

- **Method of detection**
  - Presence of Antibodies in Blood Sample

**PCR TESTING**

- **Use Cases**
  - Gold Standard for Point of Care Diagnostic

- **Result Wait Time**
  - Instant: 5-45 Minutes

- **Sample Collection**
  - Nasal Swab

- **Method of Detection**
  - Partial Genetic Markers of the Virus

- **Downsides**
  - Requires Expensive PCR Machine

**CORONAVIRUS ANTIBODIES**

**COVID-19 STAGES, TARGET TIMELINES AND CLINICAL**

**DIFFERENCE BETWEEN IGG AND IGM**

- **IgM Only**
  - Immunoglobulin M (IgM), which is found mainly in the blood and lymph fluid, is the first antibody to be made by the body to fight a new infection.

- **IgG Only**
  - Immunoglobulin G (IgG), the most abundant type of antibody, is found in all body fluids and protects against bacterial and viral infections.

- **Both**
  - Patient is still fighting infection

**COVID-19 “CORONAVIRUS” IGG/IGM RAPID TEST KIT**

- **Detection Window**
  - IgM may appear in blood within 3-5 days. IgG will appear as soon as 1-2 weeks

- **Sample**
  - Test can work with whole blood, plasma and serum samples

- **Storage**
  - The kit can be stored at room temperature or refrigerated (2-30°C)

- **Shelf Life**
  - 24 months from manufacture date

**DISCLAIMER:**

This is for information purposes only. Detection windows will vary from person to person.

**DEDICATION:**

More information, such as the product insert, clinical trial results, and CE documentation is available at request.
